

## 2019 ANNUAL DRINKING WATER QUALITY REPORT

PWSID #: 5650037

NAME: WATERFORD WATERWORKS

*Este informe contiene información muy importante sobre su agua de beber. Tradúzcalo ó hable con alguien que lo entienda bien.* (This report contains very important information about your drinking water. Translate it, or speak with someone who understands it.)

### WATER SYSTEM INFORMATION:

This report shows our water quality and what it means. If you have any questions about this report or concerning your water utility, please contact the Ligonier Township Municipal Authority at 724-239-7464. We want you to be informed about your water supply. If you want to learn more, please attend any of our regularly scheduled meetings. They are held the first Wednesday of each month at the Ligonier Twp Building at 7:00 pm.

### SOURCE(S) OF WATER:

Our water source is a 415 foot deep well located off Kissell Springs Road which draws from the Mauch Chunk aquifer.

A Source Water Assessment of our source was completed in 2005 by the PA Department of Environmental Protection (PADEP). The Assessment has found that our source has a low risk of significant contamination. The Assessment is available by writing to the Ligonier Township Municipal Authority. The Assessment was distributed to municipalities, water supplier, local planning agencies and PADEP offices. Copies of the Assessment is available for review at the PADEP Southwest Regional Office, Records Management Unit at 412-442-4000.

**Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).**

### MONITORING YOUR WATER:

We routinely monitor for contaminants in your drinking water according to federal and state laws. The following tables show the results of our monitoring for the period of January 1 to December 31, 2019. The State allows us to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of our data is from prior years in accordance with the Safe Drinking Water Act. The date has been noted on the sampling results table.

### DEFINITIONS AND ABBREVIATIONS:

**Action Level (AL)** - The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

**Maximum Contaminant Level (MCL)** - The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

**Maximum Contaminant Level Goal (MCLG)** - The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

**Maximum Residual Disinfectant Level (MRDL)** - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

**Maximum Residual Disinfectant Level Goal (MRDLG)** - The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

**Treatment Technique (TT)** - A required process intended to reduce the level of a contaminant in drinking water.

**ppm** = parts per million, or milligrams per liter (mg/L)

**ppb** = parts per billion, or micrograms per liter (µg/L)

**DETECTED SAMPLE RESULTS:**

Chemical Contaminant	MCL In CCR Units	MCLG	Highest Level Detected	Range of Detections	Units	Violation Y/N	Sources of Contamination
Chlorine (2019) Distribution	MRDL = 4	MRDL = 4	0.68 (June.)	0.47 – 0.68	ppm	N	Water additive used to control microbes
Barium (4/17/2018)	2	2	0.284	(a)	ppm	N	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits
Trihalomethanes (TTHM) (8/13/2018)	80	80	9.4	(a)	ppb	N	By-product of drinking water chlorination
Haloacetic acids five (HAA5) (8/13/2018)	60	60	6.0	(a)	ppb	N	By-product of drinking water chlorination

(a) Only one sample required

**Entry Point Disinfectant Residual**

Contaminant	Minimum Disinfectant Residual	Lowest Level Detected	Range of Detections	Units	Lowest Value Sample Date	Violation Y/N	Sources of Contamination
Chlorine (2019)	0.40	.49	0.49 – 1.01	ppm	3/1/2019	N	Water additive used to control microbes.

Contaminant	Action Level (AL)	MCLG	90 <sup>th</sup> Percentile Value	Units	# of Sites Above AL of 5 Total Sites	Violation Of TT Y/N	Sources of Contamination
Lead (2019)	15	0	0	ppb	0	N	Corrosion of household plumbing systems; Erosion of natural deposits
Copper (2019)	1.3	1.3	0.138	ppm	0	N	Corrosion of household plumbing systems; Erosion of natural deposits; Leaching from wood preservatives

"If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The Waterford Waterworks is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>."

**VIOLATIONS:**

In January 2019 we were late reporting to DEP our Entry Point Chlorine Residual testing result and our distribution system Chlorine Residual Testing result.

In January 2019, we were late reporting our Nitrate/Nitrite testing results to DEP

In February 2019 we were late reporting to DEP our Entry Point Chlorine Residual testing result and our distribution system Chlorine Residual Testing result

The week of April 28, 2019 to May 4, 2019 we failed to test our distribution system for Free Chlorine. A Free Chlorine sample was taken May 7, 2019. Public notification for the missed sample is at the end of this report.

### **EDUCATIONAL INFORMATION**

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban stormwater run-off, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA and DEP prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA and DEP regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (800-426-4791).

## PUBLIC NOTIFICATION (PN) CERTIFICATION FORM

Public Water System Name: Waterford Waterworks PWSID Number: 5650037

Date of Violation: 2019

Description of Violation: During the week of 4/28/2019 through 5/4/2019 we failed to monitor for Distribution Free Chlorine.

Notified DEP (or CHD) within 1-hour Date or NA: N/A

Consulted with DEP within 24 hours Date or NA: N/A

PN Level:  Tier 1  Tier 2  Tier 3

Type of notice addressed by this certification:  Initial  Repeat

Methods and date of public notice deliveries to customers:

Method: Included with Annual Water Quality Report for 2019 Date: June 2020

Method: \_\_\_\_\_ Date: \_\_\_\_\_

Method: \_\_\_\_\_ Date: \_\_\_\_\_

Method: \_\_\_\_\_ Date: \_\_\_\_\_

The public notice included the required elements: a description of the violation; potential health effects; the population at risk; if alternate water supplies need to be used; when the violation occurred; when the system will resolve the situation; what is being done to correct the problem; actions consumers can take; water system contact information; and language encouraging broader distribution of the notice.

A copy of each type of notice that was distributed is attached to this certification form

**Certified by:**

As a representative of the Public Water System (PWS) indicated above, I certify that public notification addressing the above violation was distributed to all customers in accordance with the prescribed content, format, deadlines and delivery requirements outlined in Chapter 25 Pa. Code Chapter 109 Subchapter D of the Department of Environmental Protection (DEP)'s regulations.

*Anthony J Griffith*

Signature: \_\_\_\_\_ Date: 6/30/2020

Print Name and Title: Anthony Griffith - Manager

Phone Number: 724-238-7464

Complete and submit this form to your local DEP office **within 10 days** of issuing the public notification described above. To determine the mailing address and contact information for your local office, follow this link:
